DETAILED ACTION

Claims 1,2 and 4-23 are pending in the RCE of 5/22/07.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., In re Berg, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); In re Goodman, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re Van Omum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1,2 and 4-9 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-3 of copending Application No. 11/110,325. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claim limitations are similar. The thickness of the thermoplastic as being 100-125% of the thickness of the spacer layer in the present application would be obvious to one of ordinary skill to provide sufficient seal.

Art Unit: 1797

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

 Claims 1,2 and 4-23 are rejected under 35 U.S.C. 102(a/e) as being anticipated by US 20030052054 (corresponding application number 10/246,904)

The disclosure in the co-pending application 10/246,904 reads on the claims of the instant application. The co-pending application'904 has a publishing date of March 20, 2003, and an effective filing date of 9/20/2001, with an inventive entity different from that of the present application with one common inventor, Mark Chisholm, between the two applications. This would make the application'904 a 102(a and e) reference for the instant claims.

Art Unit: 1797

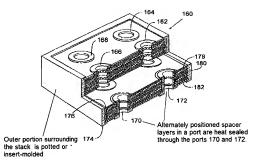

Fig 12 of 2003/0052054

Figure 12 of the reference is presented above, which shows a perspective view of the partial cross-section. The details of construction of the filter module is found in paragraphs 9-11, 33 and 36-42 of the reference. The sealing material appears to be the same in the application and the reference – thermoplastic compositions.

Arguments presented against this rejection are not persuasive.

With respect to the argument:

The reference clearly teaches forming thermoplastic constructions (TPCs) on the edges of the screens and then selectively heating the adjacent tips of the TPCs together.

Is it not what is claimed? On the other hand, if applicant meant " the reference clearly teaches forming ...(TPCs) on the edges of <u>the membrane</u> and then selectively heating ...", see figures 3 and 6-9 of the reference. Figure 3 has the TPC molded to the

Art Unit: 1797

porous support (56) of the membrane and to the porous screen (60) on the top (paragraph 33), which are also shown in the details of assembly in figures 6-11.

Independent claims 1, 7, 21, 22 and 23 recite the thermoplastic sections as formed about the periphery of the *filtrate spacer* layers and around a port; and in independent claims 13 and 20, the thermoplastic sections are formed around the periphery and ports of *permeable spacer layer*. Claims do not recite that the thermoplastic sections are formed integral to these layers. The teaching of the reference, that the TPCs are molded on to the membrane backing or screen on top or both, actually form around or about the periphery of the filtrate spacer layers as seen in the assembly drawings. The screen (60) and membrane backing (56) are permeable spacer layers; the membrane backing also can be the filtrate spacer layer, which is integral to the membrane. Thus claims are anticipated.

Response to Arguments

Arguments presented are not persuasive.

With respect to the argument:

The reference clearly teaches forming thermoplastic constructions (TPCs) on the edges of the screens and then selectively heating the adjacent tips of the TPCs together.

Is it not what is claimed? On the other hand, if applicant meant "the reference clearly teaches forming ...(TPCs) on the edges of *the membrane* and then selectively heating ...", see figures 3 and 6-9 of the reference. Figure 3 has the TPC molded to the

Art Unit: 1797

felt-backing of the membrane and to the porous screen (60) on the top, which is also shown in the details of assembly in figures 6-11.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Krishnan S. Menon whose telephone number is 571-272-1143. The examiner can normally be reached on 8:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David R. Sample can be reached on 571-272-1376. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
